

FSA-PROJECT

RENTAREA

A modern property rental platform — built end-to-end.

PRESENTED BY OLEH POIASNIK

rent-area.com

Problems

PROBLEM 01

Outdated listings.

Renters scroll through stale ads with vague addresses, missing photos and no way to verify if the place is still available.

PROBLEM 02

No tooling for owners.

Posting a property is a manual chore — photos, geocoding and updates are spread across spreadsheets and messengers.

PROBLEM 03

Fragmented communication.

Renters and owners juggle phone, WhatsApp and email. There is no shared place to chat, book a viewing and keep history.

Methodology

DDD & TDD

DDD MODELS THE BUSINESS DOMAIN IN CODE. TDD DRIVES EACH FEATURE WITH TESTS WRITTEN BEFORE THE IMPLEMENTATION.

Hexagonal Architecture

A DESIGN PATTERN THAT SEPARATES CONCERNS AND ISOLATES THE APPLICATION CORE FROM EXTERNAL DEPENDENCIES.

REST API

AN ARCHITECTURAL STYLE FOR NETWORKED APPLICATIONS — A SCALABLE, FLEXIBLE APPROACH TO BUILDING WEB APPS.

DevOps

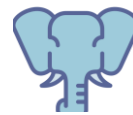

A SET OF PRACTICES THAT IMPROVE COLLABORATION AND COMMUNICATION BETWEEN DEVELOPMENT AND IT OPERATIONS TEAMS.

Technology stack

Front-end

Back-end

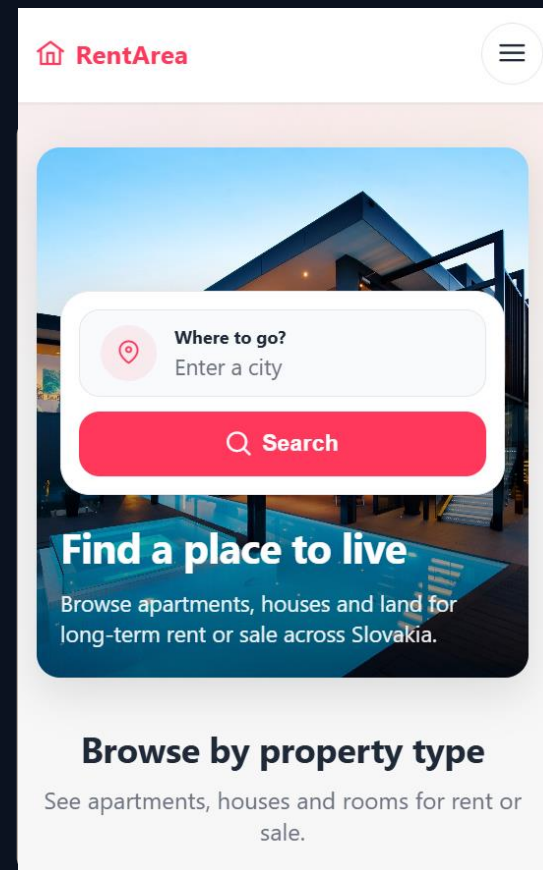

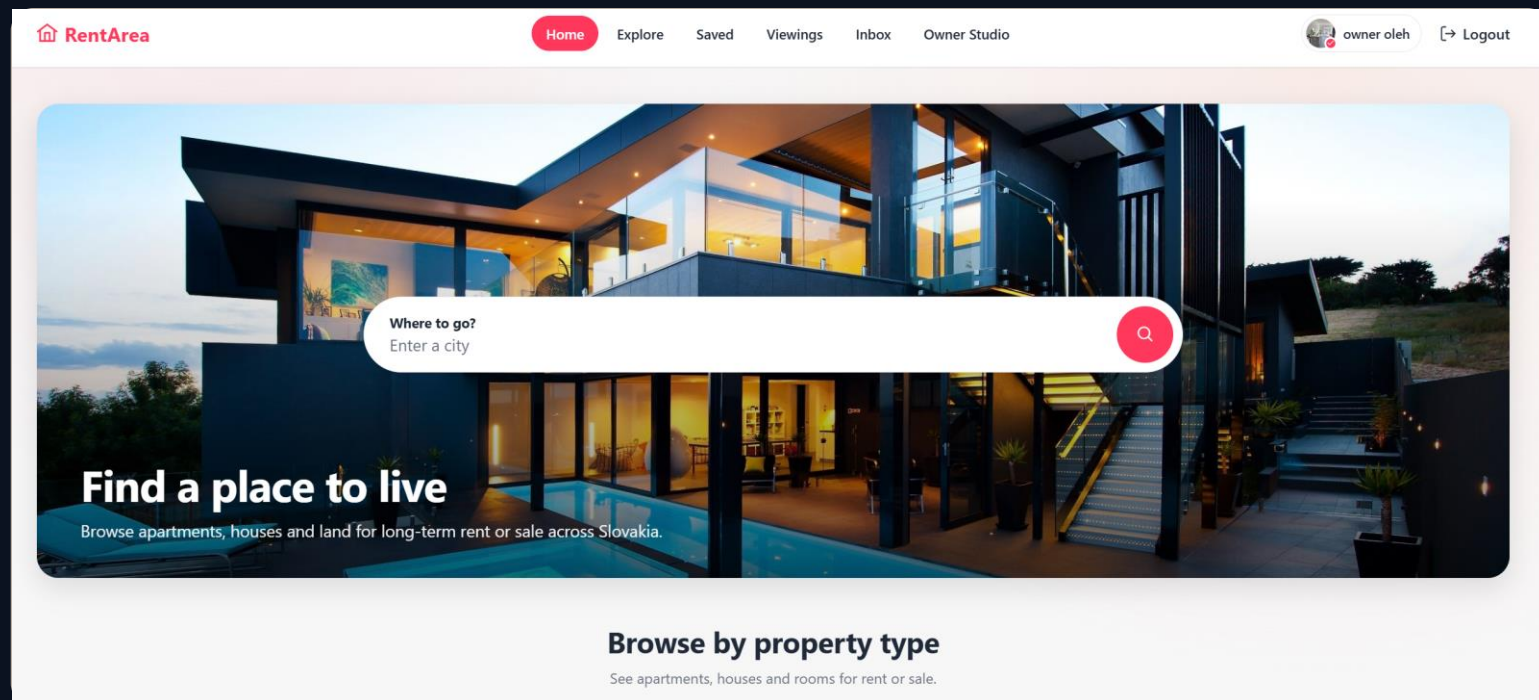

DevOps

Access on any device

Mobile-first responsive layout — desktop, tablet, phone share the same component tree.

What it does

01

Multi-step wizard

Listing creation in six guided steps with per-step validation, edit mode support and inline server errors.

02

Geocoded address

Every address is verified and geocoded via Nominatim — coordinates persisted on the listing.

03

Photo gallery

Up to 20 photos per listing. First image becomes the cover; upload, preview and remove before publishing.

04

In-app messaging

Renters and owners chat per-listing. Read receipts, unread count and listing context always visible.

05

Viewing requests

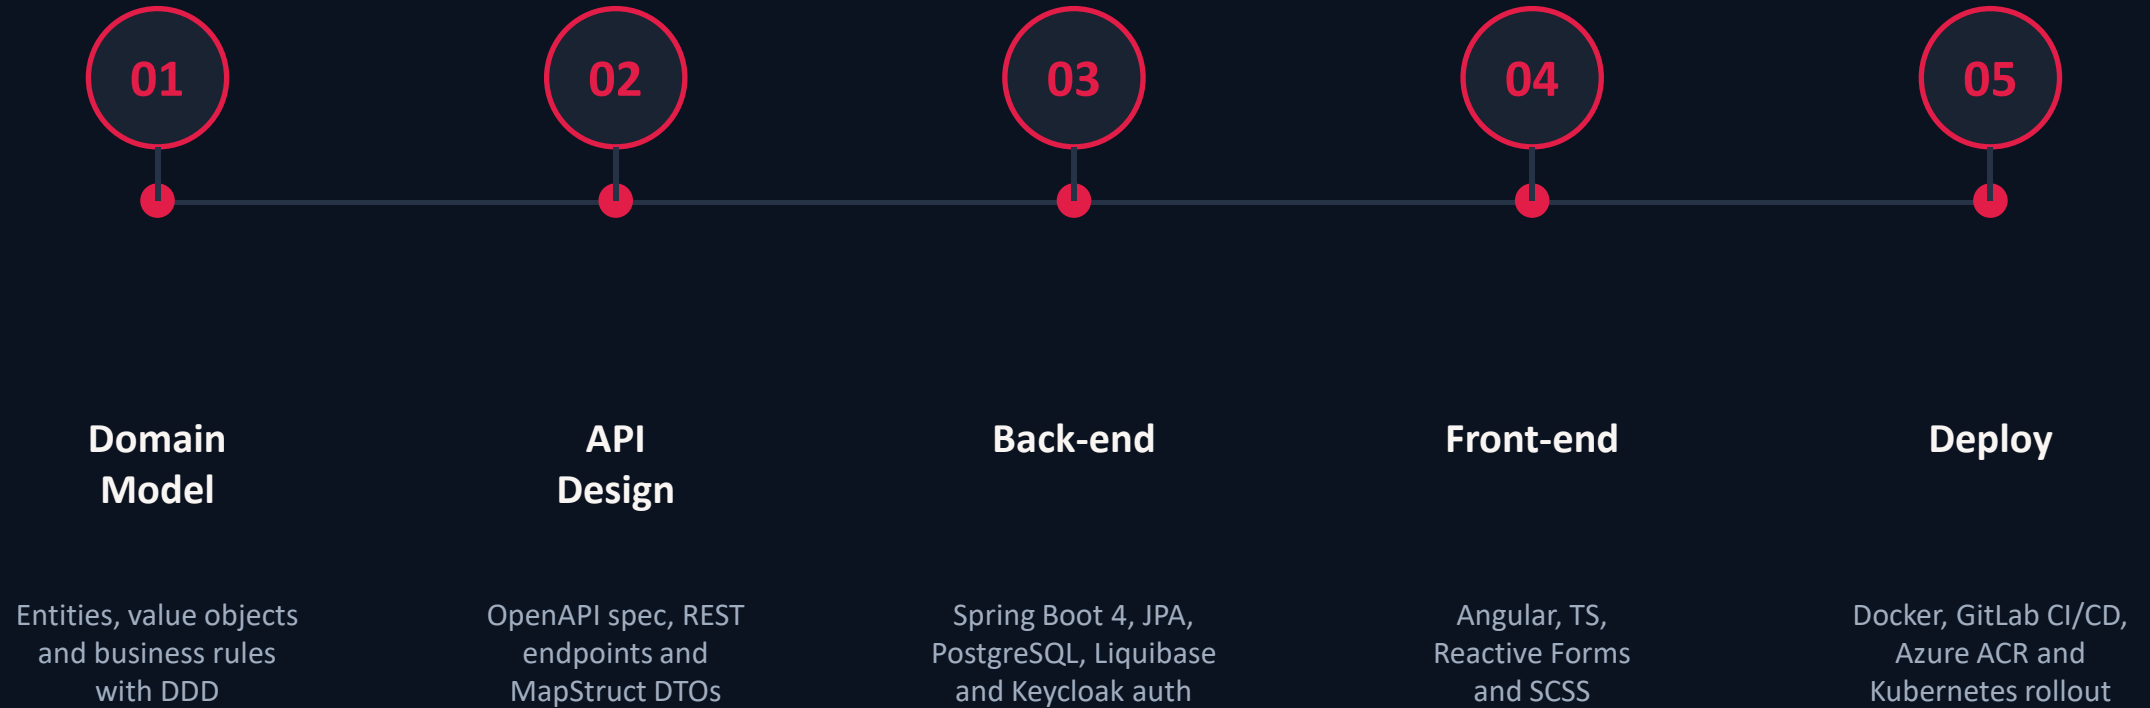

Booking flow with date and optional notes. Owner can confirm or decline each request from the dashboard.

06

Owner dashboard

Stats, listing statuses (active / inactive) and per-listing actions — activate, deactivate or delete.

Development stages

Future steps

01

Payments & deposits

Stripe-powered booking deposits with refundable holds and owner payouts.

02

Reviews & ratings

Let renters leave reviews for listings and owners after a viewing or stay.

03

Saved search alerts

Notify users when a new listing matches their saved search criteria.

What I've learned

- 1** BUILD A FULL-STACK PRODUCT FROM SCRATCH — BACKEND, FRONTEND AND CLOUD
- 2** WRITE CLEAN, WELL-STRUCTURED CODE THAT IS EASY TO EXTEND AND MAINTAIN
- 3** DESIGN A RESPONSIVE INTERFACE THAT WORKS BEAUTIFULLY ON ANY DEVICE
- 4** DEPLOY AND RUN A REAL APPLICATION IN A PRODUCTION ENVIRONMENT
- 5** SOLVE REAL PROBLEMS AND GROW AS A DEVELOPER WITH EVERY COMMIT

Thank you.

A short, horizontal red line positioned under the first letter 'T' of the text 'Thank you.'
